

Praxis Lab Weekly Reading Summaries Week 10

Andrew Yang

Thille

Thille believes that adoptive learning can assist professors in lecturing students, and it should be developed by the colleges themselves.

Burns

Predictions about big data include it becoming useful, policy sliding towards it, privacy and security issues arise, and colleges should collaborate.

Pitcan

Data privacy and security issues are becoming prominent, and organizations should take actions increasing the awareness of their employees.

Zeide

Good use of data in colleges will improve the success rate of their students, as we can see in examples such as Georgia State.

Blumenstyk

As big data comes into education, regulations are being discussed. One practices currently being used is to have students sign consent forms.

Young

USU uses learning analytics to track students' online class taking activities, such as what pages they visit.
